EOF compleja

 $\mathbb C$ es mejor que $\mathbb R$

Elio

Ejemplo

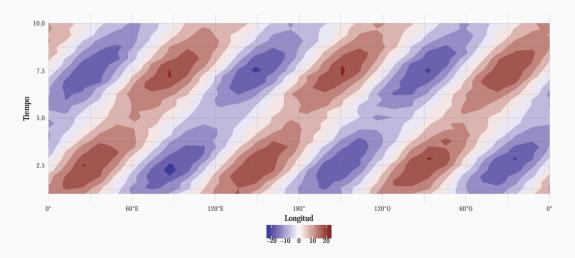

Figure 1: Hovmoller de una onda propagante con amplitud modulada.

EOF de toda la vida

wave.eof <- EOF(wave ~ x | t, data = prop, n = 1:10)
screeplot(wave.eof)</pre>

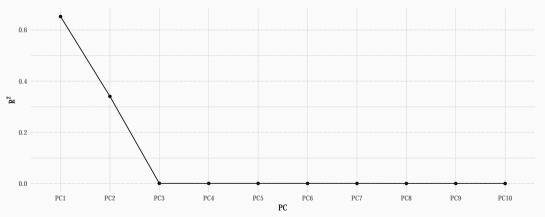

Figure 2: Screeplot de Componentes Principales.

EOF de toda la vida

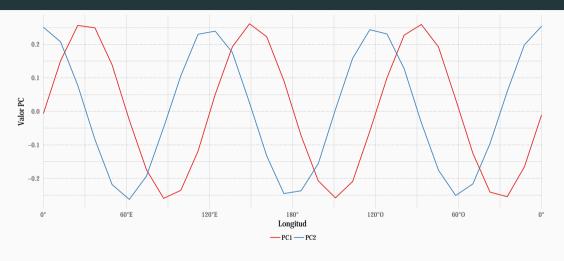

Figure 3: Componete principal espacial.

EOF de toda la vida

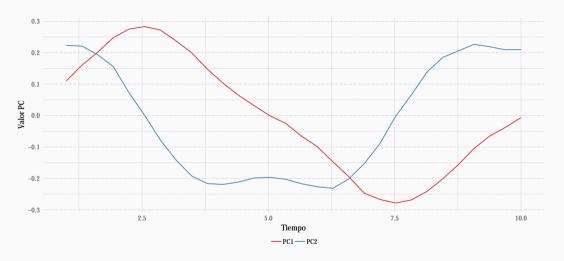

Figure 4: Serie temporal de cada componente principal.

Hilbert

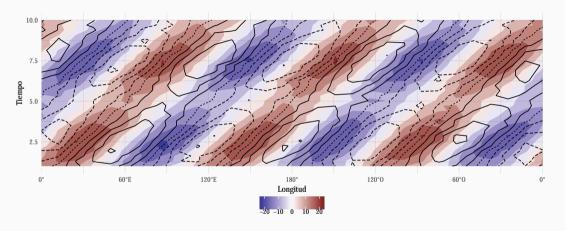

Figure 5: Parte real (sombreado) y parte imaginaria de la transformada de Hilbert.

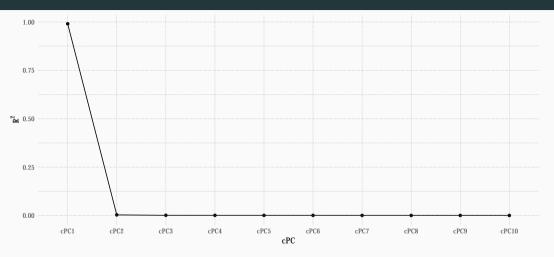

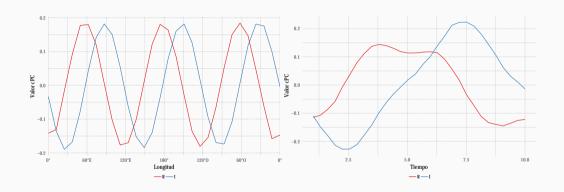

Figure 6: Screeplot the Componentes Principales Complejas

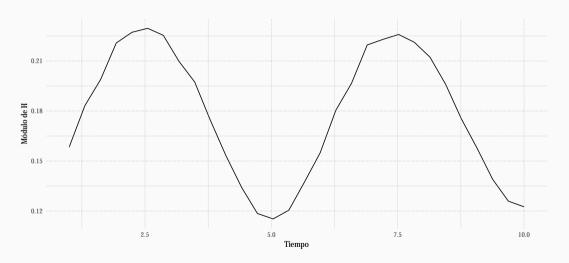

Figure 7: Serie temporal del módulo de la primera Componente Principal Compleja.

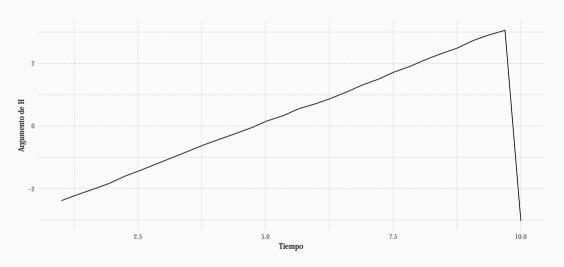

Figure 8: Serie temporal del argumento de la primera componente principal compleja.

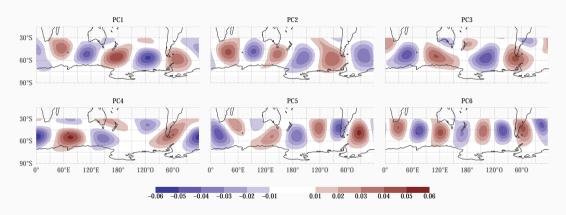

Figure 9: Componentes principales de campo de geopotencial en 200hPa (filtrado).

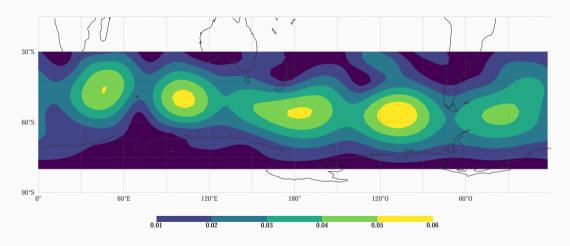

Figure 10: "Módulo" usando las primeras dos componentes princiales.

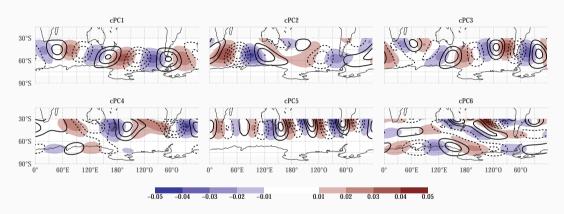

Figure 11: Parte real (sombreado) e imaginaria (contornos) de las componentes principales complejas.

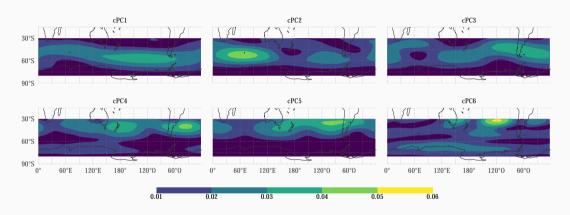

Figure 12: Módulo de las componentes principales complejas.
